1  Calyx covered with appressed straight hairs only  
   +  Calyx covered, at least in lower half, with spreading ± curved to uncinate hairs

2 (1)  Style shorter than the fruiting calyx  
   +  Style as long as the fruiting calyx

3 (1)  Annuals. Pedicels shorter than the fruiting calyx 
   +  Perennial or biennials. Pedicels equal to or longer than fruiting calyx

4 (3)  Calyx spreading to deflexed; lower half of calyx mostly with appressed hairs with few uncinate ones
   +  Calyx erect, ± appressed to the flowering axis; lower half of calyx mostly with curved to uncinate hairs

5 (3)  Nutlets ± acute at apex, uniformly margined 
   +  Nutlets ± obtuse at apex, margined only on upper half

6 (5)  Stem (-s) not flaccid; much branched. Calyx lobes ± constricted in fruit. Corolla limb 2.5-4 mm broad
   +  Stem ± flaccid, generally less branched. Calyx open in fruit. Corolla limb 5-7 mm broad

1  *Myosotis caespitosa*  
2  *Myosotis palustris*  
3  *Myosotis refracta subsp. chitralica*  
4  *Myosotis stricta*  
5  *Myosotis alpestris subsp. asiatica*  
6  *Myosotis arvensis*  
7  *Myosotis sylvatica*
